SECTION II—CLAIMS

1.-30. (Canceled)

31. (Currently Amended) An evaporator, comprising

a base in configured to be thermally coupled to a semiconductor heat

source, the base including a cavity defined by a bottom and a peripheral portion

around the perimeter of the bottom;

a top cover secured to the peripheral portion of the base so as to define a

sealed volume in which a working fluid is vaporized;

a liquid inlet port to receive the working fluid in a liquid state, operatively

coupled to the sealed volume;

a vapor outlet port from which the working fluid exits the evaporator in a

vapor state, operatively coupled to the sealed volume;

a plurality of structural elements formed in the bottom or the top cover,

wherein the plurality of structural elements extending between the bottom and the

top-cover to prevent the sealed volume from collapsing when the evaporator is

operated such that evaporation of the working fluid occurs under sub-atmospheric

conditions; and

a wicking structure, disposed within a portion of the cavity, having a top

surface on which a meniscus of the working fluid is formed and a bottom surface

into which the working fluid is drawn through a capillary mechanism and a

pressure differential between a pressure of the working fluid in the meniscus and

a pressure of vaporized working fluid in the sealed volume.

P11893D2 - Amendment C BSTZ Seattle - 3 -

Claims

- 32. (Canceled)
- 33. (Previously Presented) The evaporator of claim 31, wherein the wicking structure comprises a volume of a sintered material.
- 34. (Currently Amended) The evaporator of claim [[32]] 33, wherein the sintered material comprises a sintered copper.
- 35. (Previously Presented) The evaporator of claim 31, wherein each of the base and the top cover comprise stamped metal components.
- 36. (New) The evaporator of claim 31 wherein when the plurality of structural elements are formed in the bottom they extend between the bottom and the top cover
- (New) The evaporator of claim 36 wherein the wicking structure includes holes 37. therein to accommodate the plurality of structural elements extending between the bottom and the top cover.
- 38. (New) The evaporator of claim 31 wherein when the plurality of structural elements are formed in the top cover they extend between the top cover and the wicking structure.
